

Claims

1. A joint for flat rigid parts, comprising projections, which are embodied on the mating sides of the parts in the form of bulbous breadths at the edge thereof and necks at the basis thereof, and complementary joggles, which are
5 embodied in the form of bulbous slots corresponding to the bulbous breadths of the projections and gradually changing into grooves corresponding to the projections necks, c h a r a c t e r i z e d i n t h a t the surfaces of the projections edges and the surfaces of the slots bottoms mating therewith are embodied in the form of cones, wherein the peaks of the conical surfaces of the projections edges and of the
10 slots bottoms are arranged on the opposite sides with respect to the connecting parts.
2. A joint as claimed in claim 1, characterized i n t h a t the radius of curvature of the guiding lines of the conical surfaces of the projections edges and of the slots bottoms are embodied in such a way that they tend to infinity.
3. A joint as claimed in claim 1, c h a r a c t e r i z e d i n t h a t at
15 least one connecting part is embodied in the form of a through-thickness composite part.
